

PassTheAux Project Overview

This document provides a consolidated overview of the PassTheAux project, outlining the user flow, key features, and design considerations. It is intended to serve as a guide for UX designers, developers, and pilot testers.

I. Core Concept

PassTheAux is a mobile (and/or web) application designed to enhance the live music experience by connecting users and DJs in real-time. It allows users to discover events, request songs, and interact with the DJ, while providing DJs with tools to manage requests, understand their audience, and connect with fans.

II. User Personas

The application caters to two primary user personas:

- **General Users:** Individuals attending events who want to request songs, discover new music, and connect with DJs.
- **DJs:** Music performers who use the app to manage requests, interact with their audience, and promote their events.

III. Key Features

The application's core features include:

- **Event Discovery:** Users can find events based on location, date, DJ, and venue.
- **Song Requests:** Users can search for songs on Spotify and request them in real-time at events.
- **DJ Interaction:** DJs receive and manage song requests, and can communicate with users.
- **User Profiles:** Users can customize their profiles, view their event history, and see their most requested songs.
- **DJ Profiles:** DJs can showcase their music, events, and social media presence.
- **Real-time Updates:** Users receive notifications about approved/denied requests and event updates.
- **Rewards System:** Users can earn rewards for interacting with the app.
- **Account-Based System:** Users can sign up using email, Google, or Spotify. DJs and Venues undergo a verification process.
- **Geofenced Check-in:** Users can only check in to an event when they are within a 2km radius of the venue.

IV. User Flow

The following outlines the user flow through the application:

A. Login/Sign-Up

1. Login Page:

- Login with Username/Email
- First Name
- Last Name
- Username
- Email
- Create a Password
- Verify Password
- Error Handling:
 - Username already in use
 - Passwords do not match
- Email Verification
- Other Login Options:
 - Login as Guest (BETA) - Data cleared daily
 - Sign Up with Google
 - Sign Up with Spotify
- DJ Sign-Up Differences:
 - Additional verification required (portfolio links, proof of work)
 - Limited initial access until verified

2. Welcome Page (First-Time Users):

- Welcome Message
- Optional Questionnaire (Music tastes, favorite artists, etc.)
- Overlay App Tutorial

B. Main Landing Page

- Incomplete Questionnaire Prompt (appears for up to 5 attempts)
- Daily Pop-up (for announcements, e.g., Request Etiquette) Appears for 5 logins. And once, every time there's an update to the text.
- Links to:
 - What's Happening Tonight (location-based, adjustable radius)
 - Search (by location, DJ, venue, genre)
 - User Profile
 - DJ List
- "Now Banner" (appears when checked into an event, for quick access to request page)

C. What's Happening Tonight Page

- List of events happening that night, with:
 - Logo, Event Title, Start Time, DJ Name
 - Clicking an event reveals: Description, DJ/Venue profiles, End Times, Event Series info
- Horizontal scrollable date banner at the bottom

D. Event Search Page

- Embedded map to choose a perimeter
- Default radius: 15km
- Toggle to show past events (within 3 months)
- Live update of search results under the map
- Filters: DJ, Venue, and more

E. Event Details Page

- Event details (description, time, etc.)
- Venue logo (clickable to Venue Profile)
- DJ logo (clickable to DJ Profile)
- Venue location on map
- DJ/Venue History Recap (Previous & Recurring Events)
- Venue and Event Series media content
- "Start Making Requests (without Checking-In)" (BETA)
- Check-In Button
- "Let the DJ Know I Arrived" toggle

F. Main Request Page (Available After Check-In)

- Spotify Search Bar
- Song Search Results (title, artist, album art)
- Secondary song details (last requested, release date, album)
- Visual feedback on request status (approved, denied, both)
- "Request Song" button changes to "Upvote" if the song has already been requested
- Incoming request banner
- Sortable request list (title, artist, requester, time, votes, leaderboard position)
- Upvoting/Downvoting

G. User Profile

- Profile Photo (clickable to edit)
- Edit button to change:
 - Biography

- Favorite songs, artists, albums
- Most recent requests
- Top DJ/Venue (based on events attended)

H. DJ Profile (Viewed by Users)

- Profile Photo
- DJ Logo
- Stats (Top Requested/Upvoted)
- Upcoming Events (horizontal scroll)
- Connected Venues
- Follower Count
- Music Tastes (favorite artists, albums)
- Links to portfolios (MixCloud, SoundCloud, Spotify, etc.)

I. DJ Profile (Editable by DJ)

- Basic Info
 - Logo (Click to Edit)
 - Choose from Gallery
 - Upload New Logo
 - Name (Toggle Public/Private):
 - Display Real Name
 - Display DJ Name
 - DJ Name (Text Field)
 - Biography/About Me (Text Area)
 - Location (Dropdown/Searchable)
- Connected Socials:
 - "Add New Connection" Button
 - Dropdown List of Recommended Social Networks
- Music
 - Genres (Multi-Select Dropdown)
 - Influences (Text Area)
 - Featured Mixes/Tracks (Link Input)
- Equipment (Text Area)
- Residencies
 - Connect to Venues
 - List as Location/Address
- Profile Preferences
 - Contact Information Visibility (Toggle)
 - Email

- Phone Number
 - Event Announcements (Toggle)
 - Request Settings (Toggle)
- Photos/Videos (Media Gallery)
- Toggleable Info
 - Name Visibility
 - Contact Information Visibility
 - Location Visibility
 - Social Media Links Visibility
 - Genres Visibility

V. Notifications

- **User Notifications:**
 - In-Event:
 - Approved Requests
 - Denied Requests
 - Highlight Events
 - Out-of-Event:
 - Upcoming Event Reminders
 - New Event Announcements (from followed DJs/venues)
 - Rewards/Milestone Achievements
- **DJ Notifications:**
 - VIP User Arrival
 - Leaderboard Progress
 - New Song Requests
 - High Priority/Boosted Requests
 - User Feedback
 - Event-Specific Updates
 - Technical/App Related
 - Reward/Achievement Related
 - VIP User Interactions
 - Request Limit Reached

VI. Rewards System

Users can earn rewards for:

- Requesting
- Voting
- Attendance/Engagement

- Leaderboard Performance
- Social Sharing

VII. Request Limits

- Time-based or per-event limits on song requests.

VIII. User Education

- In-app messages to educate users about DJ workflow:
 - Unavailable Song Message
 - Event Details
 - Welcome Message
 - Request Confirmation
 - Request Etiquette

IX. Next Steps

1. **DJ-Specific Differences:** Outline the differences in functionality and UI for DJs across all relevant pages (beyond just the profile page).
2. **Venue Experience:** Define the Venue user persona and detail their specific needs and functionalities within the app.
3. **Gap Filling:** Revisit each section of this document and expand on any areas that lack sufficient detail (e.g., specific UI elements, detailed descriptions of features).
4. **UI Design:** Begin the process of designing the user interface, creating wireframes and mockups based on the user flows and feature descriptions in this document.
5. **UX Refinement:** Work with a UX designer to refine the user experience, ensuring the app is intuitive, engaging, and meets the needs of both users and DJs.
6. **Pilot Testing:** Prepare a version of the app for pilot testing with a group of DJs and users. Gather feedback and iterate on the design and functionality.

X. Ongoing Considerations

- **Monetization Strategy:** Determine how the app will generate revenue (e.g., premium features, in-app advertising, partnerships).
- **Scalability:** Design the app with future growth in mind, considering how it will handle a large number of users and events.
- **Platform (Mobile App or Web App):** Finalize the decision.
