

1. Login Page Flow

1.1. User Arrives:

- User opens the app and lands directly on the Login Page.

1.2. User Chooses Login Method:

- The user sees options for Email/Password, Google, Spotify, and Guest (during Beta).

1.3. Flow Option A: Email/Password Login

- User taps into the "Email or Username" field and types their input.
- User taps into the "Password" field and types their password. (Option to toggle visibility).
- **"Remember Me" Checkbox:** User sees and optionally checks a "Remember Me" box to stay logged in longer.
- User taps the "LOG IN" button.
- **Success:**
 - User is authenticated.
 - If "Remember Me" was checked, the session duration is extended.
 - Navigate based on user status:
 - If first login & user type unknown -> **User Type Selection Screen** (in app_user_flow document).
 - Otherwise -> Main Landing Page/Dashboard (relevant to user type).
- **Failure (Invalid Credentials):** A clear error message appears (e.g., "Incorrect username or password."). User stays on Login Page.
- **Failure (Input Validation):** Inline error appears near the field if input is invalid *before* submitting (e.g., invalid email format).
- **Failure (Email Not Verified):** If credentials are correct but email isn't verified (see Section 3B below), show message: "Please verify your email first. [Resend Verification Email] link?".

1.4. Flow Option B: Social Login (Google/Spotify)

- User taps the "Login with Google" or "Login with Spotify" button.
- User is briefly redirected to the Google/Spotify authentication screen.
- User authenticates with the chosen service.
- **Success:**
 - User returns to the app, logged in.
 - Navigate based on user status:
 - If first login & user type unknown -> **User Type Selection Screen** (in app_user_flow document).

- Otherwise -> Main Landing Page/Dashboard (relevant to user type).
- **Failure (User Cancels/Auth Fails):** User returns to the Login Page. A subtle error message might appear.

1.5. Flow Option C: Guest Login (During Beta)

- User taps the "Continue as Guest" link/button.
- **Success:** User is navigated to the main landing page with guest permissions. (Notification about limitations might appear).

1.6. Navigation Option: Sign Up

- User taps the "Sign Up" link.
- User is navigated to the **Sign Up Page** (see Section 2 below).

1.7. Navigation Option: Forgot Password

- User taps the "Forgot Password?" link.
- User is navigated to the **Password Reset Flow - Request Screen** (see Section 4A below).

2. Sign Up Page Flow

2.1. Entry:

- User arrives from the Login Page's "Sign Up" link.

2.2. Information Requested:

- Field: First Name (Required)
- Field: Last Name (Required)
- Field: Username (Required - check for uniqueness)
- Field: Email Address (Required - check for uniqueness & format)
- Field: Create Password (Required - with strength indicator/rules displayed)
- Field: Verify Password (Required - must match Create Password field)
- **Checkbox:** "I agree to the [Terms of Service](#) and [Privacy Policy](#)." (Required - Links must be functional).

2.3. User Action:

- User fills in all required fields.
- User reads (clicks links) and checks the Terms/Privacy agreement box.
- User taps the "SIGN UP" button.

2.4. Validation & Error Handling:

- **Inline:** Check email format, password match, password strength rules, required fields as user types or leaves fields.

- **On Submit:**
 - Verify all required fields are filled and checkbox is checked.
 - Check if Username already exists in the database. If so, show error: "Username is already taken, please choose another."
 - Check if Email Address already exists. If so, show error: "An account with this email already exists. [Log In](#) or [Reset Password?](#)"
 - If any errors, user stays on Sign Up page with clear error messages near relevant fields.

2.5. Success:

- User account is created in the backend (marked as 'unverified').
- User is navigated to the **Email Verification Prompt Screen** (see Section 3A below).

3. Email Verification Flow

3.A. Prompt Screen (In-App)

- **Entry:** User arrives immediately after successful Sign Up (Section 2.5).
- **Display:**
 - Message: "Account Created Successfully!"
 - Message: "Please check your email inbox at **[user's email]** for a verification link to activate your account. The link is valid for [e.g., 24 hours]."
 - Button/Link: "Resend Verification Email"
 - Button/Link: "Go to Login Page"
- **User Action:** User typically leaves the app to check email. Alternatively, taps "Resend Email" (triggers backend to send again, provides feedback like "Email Resent") or taps "Go to Login Page".
- **Navigation:** Tapping "Go to Login Page" navigates to the Login Page.

3.B. Handling Unverified Login Attempt (On Login Page)

- **Scenario:** User tries to log in (using email/password) before clicking the verification link.
- **Action:** After user enters correct credentials and taps "LOG IN":
 - Instead of logging in, display an error message on the Login Page: "Your account is not active yet. Please check your email to verify your account. [Resend Verification Email] link?".

3.C. Clicking Verification Link (Web/Deep Link)

- **Entry:** User clicks the unique verification link in the email they received.
- **Action:** Link opens a simple web page (or potentially deep links back into the app

if configured).

- **Display:**
 - Message: "Email Verified Successfully!"
 - Message: "Your account is now active."
 - Button: "Proceed to Login" / "Open App"
- **Backend Action:** The link endpoint marks the user's account as 'verified' in the database.
- **Navigation:** Clicking the button navigates the user to the app's Login Page (or opens the app directly to the Login Page via deep link).

3.D. Subsequent Login (After Verification)

- **Scenario:** User returns to the Login Page after successfully verifying via the link.
- **Action:** User logs in using Email/Password or linked Social account.
- **Success:** User is authenticated and navigates according to standard login success (Section 1.3 / 1.4) - likely to User Type Selection or Main Landing Page.

4. Password Reset Flow

4.A. Request Reset Screen (In-App)

- **Entry:** User arrives from the Login Page's "Forgot Password?" link (Section 1.7).
- **Display:**
 - Title: "Reset Password"
 - Instruction: "Enter the email address associated with your account."
 - Field: Email Address
 - Button: "Send Reset Link"
 - Link/Button: "Back to Login"
- **User Action:** User enters their email address, taps "Send Reset Link".
- **Validation:** Check if the entered text is a valid email format.
- **Action (On Submit):**
 - Backend checks if an account exists with that email.
 - **If email exists:** Generate a unique, time-limited password reset token/link and send it to the user's email address.
 - **Regardless of existence (Security):** Display a generic success message on the screen: "If an account is associated with **[user's email]**, a password reset link has been sent. Please check your inbox. The link will expire in [e.g., 1 hour]."
- **Navigation:** User typically stays on this screen seeing the message, or can navigate "Back to Login".

4.B. Clicking Reset Link & Setting New Password (Web/Deep Link)

- **Entry:** User clicks the unique password reset link in the email.
- **Action:** Link opens a simple web page (or deep link).
- **Display:**
 - Title: "Create New Password"
 - Field: New Password (with strength indicator/rules)
 - Field: Confirm New Password
 - Button: "Reset Password"
- **User Action:** User enters a new password in both fields, taps "Reset Password".
- **Validation:**
 - Check if passwords match.
 - Check if password meets strength requirements.
 - Check if the reset link/token is still valid (not expired or already used).
- **Error Handling:** If validation fails (mismatch, weak password, expired link), show clear error messages.
- **Success:**
 - **Backend Action:** Update the user's password in the database, invalidate the reset token.
 - **Display:** Message: "Password Reset Successfully!" Button: "Proceed to Login".
- **Navigation:** Clicking the button navigates the user back to the app's Login Page.

4.C. Login with New Password (In-App)

- **Scenario:** User returns to the Login Page after successfully resetting via the link.
- **Action:** User logs in using their email and the *newly created* password.
- **Success:** User is authenticated and navigates normally (Section 1.3).

Note: This document describes the signup, login, and account access flows from the user's perspective.
