

1. "Tonight" Page Flow

1.1. Purpose:

- To provide users (primarily Listeners) with a focused view of events happening on the current calendar date ("tonight") in their vicinity.
- Based on a default 15km radius.

1.2. Entry:

- Accessed via a dedicated "Tonight" link/tab in the main navigation or possibly as a primary filter option on the main Event Feed/Map.

1.3. Elements:

- **Common Header:** Includes Search, Notifications, Profile Icon (as defined in landing_page_flow).
- **Date Display:** Clearly indicates "Tonight, Tuesday, April 8th".
- **View Toggle (Optional):** Buttons/tabs to switch between "List View" and "Map View".
- **List View (Default?):**
 - Scrollable list of event cards for events starting or ongoing tonight.
 - Sorted by default (e.g., Start Time or Distance).
 - Each card shows: Event Name, Venue Name, DJ Name, Start Time, Distance.
 - Tapping a card navigates to the **Event Details Page**.
- **Map View:**
 - Interactive map displaying pins only for events happening tonight.
 - Tapping a pin shows basic info + link to **Event Details Page**.
- **Filter/Sort Options (Optional):** Allow filtering by Genre, Venue Type; Sorting by Start Time, Distance.
- **Empty State:** Message displayed if no events are found for tonight in the area (e.g., "No events scheduled nearby for tonight.").

1.4. Functionality:

- Quickly browse events happening on the current evening.
- View event locations on a map specifically for tonight.
- Navigate to detailed information for any listed event.
- Apply filters or sorting for tonight's events.
- Switch between list and map representations.

2. Event Search Flow

2.1. Purpose:

- To allow all user types to actively search for specific Events, DJs, or Venues based on various criteria.

2.2. Entry:

- User taps the Search Bar located in the common header. This might expand the header, overlay a search input, or navigate to a dedicated Search screen.

2.3. Initiating Search:

- **Elements:**
 - Search Input Field: With placeholder text (e.g., "Search events, DJs, venues...").
 - Clear Button: To clear the current input.
 - Keyboard 'Search'/'Enter' key action.
 - Potentially displays recent search history below the input field.
- **Functionality:**
 - User types their search query (e.g., "Jazz night", "DJ Spin", "The Marquee").
 - Autocomplete suggestions might appear as the user types (optional).
 - User submits the search (e.g., taps 'Enter' or a search icon).

2.4. Search Results Page:

- **Elements:**
 - **Search Query Display:** Shows the term the user searched for. Allows easy editing/clearing.
 - **Filter Options:** Buttons/dropdowns to filter results by:
 - Date Range (for Events)
 - Location / Distance (using device location or manually entered location)
 - Event Type / Genre (for Events)
 - User Type (DJs / Venues)
 - **Tabbed Results:** Clear tabs to switch between result categories:
 - **"Events" Tab:** Displays a list of event cards matching the query and filters. Info per card: Event Name, Venue, DJ, Date/Time.
 - **"DJs" Tab:** Displays a list of DJ profile cards matching the query. Info per card: DJ Name, Location, Genres, Profile Pic.
 - **"Venues" Tab:** Displays a list of Venue cards matching the query. Info per card: Venue Name, Location, Type, Profile Pic.
 - **Result Count:** Shows the number of results found in the current tab/filter set.
 - **Empty State:** Message like "No results found for '[query]'".
 - **Pagination / Infinite Scroll:** For handling large numbers of results.
- **Functionality:**
 - View search results organized by Events, DJs, and Venues.

- Apply various filters to narrow down the results.
- Tap on an Event card to navigate to the **Event Details Page**.
- Tap on a DJ card to navigate to the **DJ Public Profile Page** (To be defined).
- Tap on a Venue card to navigate to the **Venue Public Profile Page** (To be defined).
- Modify the search query and initiate a new search.
- Clear filters.

3. Event Details Page Flow

3.1. Purpose:

- To provide comprehensive information about a single, specific event.

3.2. Entry:

- User taps on an event card/pin/link from the Event Feed, Map View, Tonight Page, Search Results, or DJ/Venue Dashboards.

3.3. Elements (Common to most viewers):

- **Header:** Back button, possibly Share icon,
- **Event Image/Poster:** Optional large visual at the top.
- **Event Title/Name:** Prominently displayed.
- **Date & Time:** Clear display of start and end date/time.
- **Venue Information:**
 - Venue Name (Clickable link to **Venue Public Profile Page**).
 - Venue Address (Clickable, could open device's map application).
 - Small map snippet showing venue location.
- **DJ Information:**
 - DJ Name (Clickable link to **DJ Public Profile Page**).
 - DJ Profile Picture (small).
- **Event Description:** Text area with details about the event.
- **Genre Tags:** Associated music genres.
- **Cover Charge / Ticket Info:** Displays cost, potentially a link to purchase tickets if applicable.

3.4. Elements & Functionality (Listener Specific):

- **Check-In Section:**
 - **Button:** "Check-In" - Enabled only when the event is live AND the user is within the geofence radius (e.g., 2km) of the venue. Tapping initiates the **QR Code Scan Flow**.
 - **Status:** If checked in, displays "Status: Checked In". If outside radius/time,

displays message like "Check-in available at the venue during event hours."

- **Request Song Button:**
 - Visible/Enabled only if the Listener is "Checked In" AND the DJ has enabled requests for this event.
 - Tapping navigates to the **Song Request Screen** (To be defined).
- **Live Request List (Optional):**
 - If enabled by the DJ, displays a list of currently requested/queued/played songs.
 - May include up/down vote buttons next to requested songs (Listener interaction).
- **Action Buttons:** "Add to My Calendar", "Share Event".

3.5. Elements & Functionality (DJ Specific - Viewing Their Own Event):

- **Management Buttons:**
 - "Edit Event": Navigates to an Event Editing screen.
 - "Manage Requests": Navigates to the **Request Management Screen** (To be defined).
- **Live Controls (Optional):**
 - Toggle: "Accepting Requests: On/Off".
 - Button: "View Check-ins" (navigates to a list of checked-in users).
 - Button: "Broadcast Message" (Future feature - send push notification to checked-in users).

3.6. Elements & Functionality (Venue Specific - Viewing Event at Their Venue):

- **Management Button:**
 - "Edit Event Listing": Navigates to an Event Editing screen.
- **Information Display:**
 - May show live check-in count.
 - May show request volume if shared by DJ.

3.7. Navigation:

- Back button returns the user to their previous context (Feed, Map, Search, Dashboard, etc.).
- Links within the page navigate to DJ Profile, Venue Profile, potentially external ticketing sites or map apps.

4. Missing Details to Define

- **Tonight Page:** How is the user's location determined for "nearby"? Default sort order? Specific filter options?
- **Search:** Define the exact searchable fields. Autocomplete implementation

details? Relevance ranking algorithm for results? Specific filter options available for Events vs DJs vs Venues?

- **Event Details:** What fields are mandatory vs optional when an event is created? How is ticketing integration handled? How much control does the DJ have over the visibility of the request list? What are the exact conditions/logic for enabling the "Check-In" and "Request Song" buttons?
- **Public Profile Pages:** Need to define the layout and content for DJ Public Profile and Venue Public Profile pages.
- **Check-in Flow:** Define the sequence after tapping "Check-In" (launching QR scanner, handling successful scan, error states).
- **Song Request Screen:** Define the interface for searching Spotify and submitting a request.
- **Request Management Screen:** Define the DJ's interface for viewing and managing requests.

Note: This document describes the "Tonight", "Event Search", and "Event Details" flows from the user's perspective.
